## A Study on Safety Information Sharing of Agricultural Machinery: Consideration from risk communication

Nobuhide AIHARA  
(Nagoya Bunri University)

### ABSTRACT

Japanese Government is incorporating effective farming safety measures into the agricultural policy. It is important to be sharing of information about "farming accident risk". Therefore, the technique of "risk communication" is needed to achieve sharing of this information. So I researched for a prefectural governmental office and JA group in 4 prefectures in Tokai-district (Aichi-ken, Gifu-ken, Mie-ken and Shizuoka-ken) to check the current state of the risk communication. I clarified the effective state of the risk communication for the farming safety measure from the survey result.
