Problems Related to Accounting and Auditing in Japanese Service Industry

Katsutoshi UMEDA
Kyushu Kyoritsu University

Recently, realization of both productivity growth and increasing value added in Japanese service industry is becoming extremely important for regional economic vitalization, and ensuring sustainable growth and profitability of the industry. Additionally, productivity growth of service industry is a pressing issue of the Japan's economic growth strategy.

Productivity growth of service industry can strengthen to promote efficiency and growth in the real economy through improvement of labor productivity due to the declining birthrate and aging population (the decrease in the labor force population) as well as responding to intensify global competition as globalization progresses.

In addition, realization of high added value of the service industry can strengthen to promote sustainable economic growth and stable asset formation through increasing employee income as well as expansion and sophistication of service demand.

The purpose of my work was to understand the recent trends of the realization of both productivity growth and increasing value added in Japanese service industry the internal control report system, and to consider problems related to accounting and auditing in Japan Service Industry. The purpose of this report is to report on my work. Problems related to accounting and auditing in Japanese service industry was understood in the following procedures and analyzed and examined using it: (1) understand the current situation and problems of Japanese service industry from public and private sector trends; (2) understand the current situation and problems of Japanese accounting and auditing from globalization trends; (3) based on those, extract accounting and auditing in Japanese service industry; (4) analyze and examine (3).
